QUARTZ HEAT LAMP ASSEMBLIES

These heat lamp assemblies come fitted with newly designed quartz halogen globes engineered to give a balance of heat and light. The globes have a unique screw-mounted tail connection that prevents terminal corrosion and hot joints, thus increasing globe longevity. All units are fitted with toughened safety glass covers over each light and come with an on/off switch, lead and plug.

INFRA-RED HEATING ASSEMBLIES

These units are designed generally for use in applications where more heat and no light is required. The heat is provided by a stainless steel element and an energy regulator is used to precisely control the output, emitting a very even heat over the length of the warming area. Supplied with energy regulator, lead and plug.
